Experience

Software Engineering (2018–2022)

- First Year (Java language, Calculus)
- Second Year (Java language OOP, Data Structure, HTML, CSS, JS, BOOTSTRAP, Statistics)
- Third Year (React, jQuery, Ajax, PHP Calculus, Engineering Analysis, Network, Software Management)
- Fourth Year (AI, Agile Planning, Git (version control), Network IP layer, Graphics, My Flutter Research Project)

WeCode Mobile Application Bootcamp (12 weeks)

- Basics of UX, UI design
- Git and GitHub
- Flutter Custom Widgets
- Futures and Future Builder, Streams and Stream Builder, Data Models
- State Management (Provider)
- Flutter Authentication, Phone Authentication, Email, Gmail, and Authentication Anonymously
- Firebase Fire store working with snapshots and Document References, Fire storage, Triggers
- Shared Preference, SQLite, Flutter Push Notification to tokens, handling local notification
- Dynamic Links

Projects

Zakat and Mirath Mobile Application (Flutter)

This is my fourth-year’s research flutter project, The application calculates four types of Zakat (Money, Minerals, Livestock, Agriculture), it supports Kurdish, English language, users optionally can save their zakat or just calculate without saving and they can change their profile data, they can delete their zakat, as well the application calculate different situations of Mirath.

Chat Box (Flutter)

When the user logged in, they can simply search for other users who register themselves and can chat with each other, the application supports both dark theme and light themes,

CRUD note (Flutter)

This application is simple, the rational SQL database package has been used of sqlflite, users can add notes, update, and delete the notes.

Market Database (JS, JQUERY, AJAX, PHP, BOOTSTRAP)

This is a huge market database that I created with my friend as a team it contains all the required parts that a market shop needs because we practically visited some shops and collected requirements and needs.

Amazon Clone (React and CSS)

Amazon clone is a website similar to the Amazon website, I participate in a daily YouTube live in PAPA REACT of a well-known YouTuber, I just focused on the frontend in the website, because I am not a backend developer.

Tiktok Clone (React and CSS, Mongoose, Firebase)

Tiktok clone is a complete working website similarly I was a PAPA REACT follower, dynamically gets the videos from clusters inside the Mongo DB, I hosted using Firebase Hosting

Skills

Programming Languages

JAVA, Python, Dart, PHP, JavaScript (ES6), HTML, CSS/Sass,

Libraries & Frameworks

jQuery, Ajax, React, Node.js, Next JS

Tools & Platforms

Git, Webpack, Netlify, Heroku, WordPress, Firebase

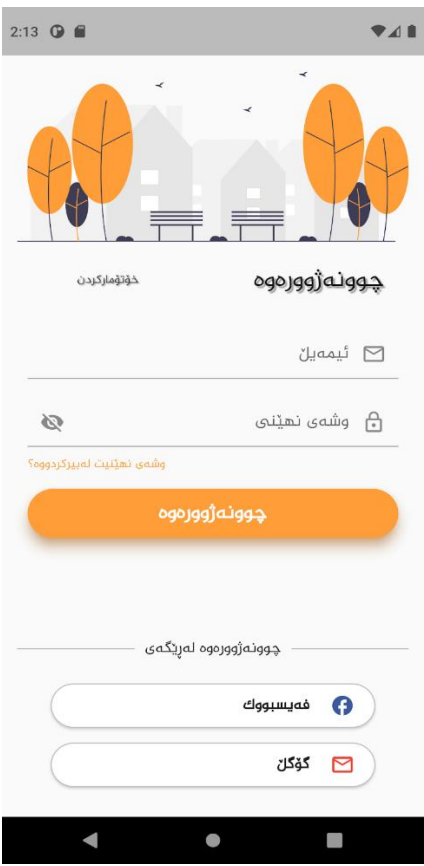

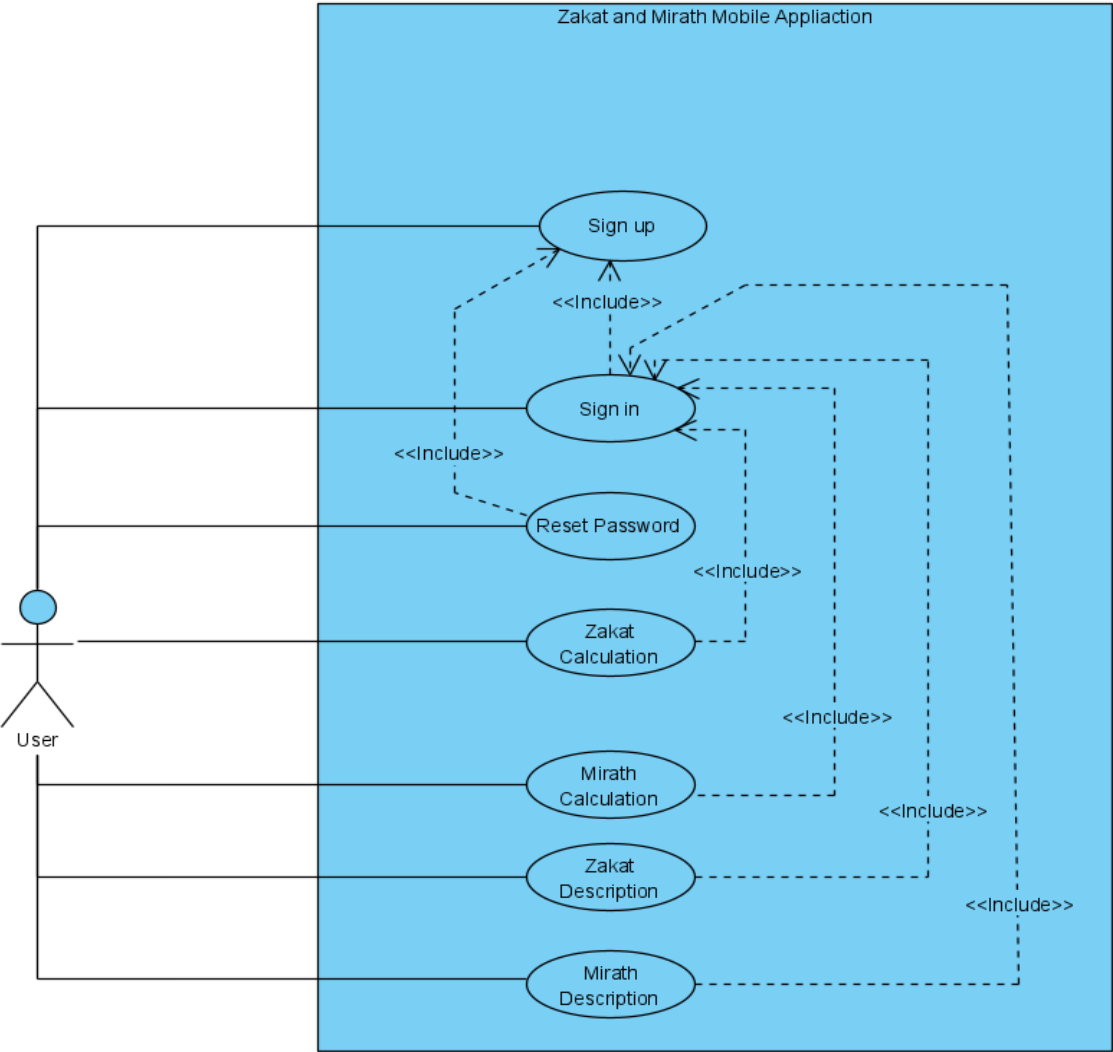

Design

Sketch, Balsamiq wireframe

Note: My portfolio has not been hosted yet, so I showed my projects here.

Zakat and Mirath Mobile Application

- 1- First, I completed benchmarking I looked for similar apps and wrote their specifications
- 2- Next, I did my own features and I designed a Use Case diagram for the app.

Market database

1-I with my friend visited some markets to see their database and we build our own.
