Technical Projects

Plant Shop Landing Page

GITHUB | DEMO

- Transformed **Figma** design into an HTML and CSS website. Demonstrated proficiency in basic front-end development technologies, Also Used **Parcel** as a Bundler.
- Collaborated with classmate to practice **Git** and **GitHub** by modifying the footer color in a cloned repository. Successfully pushed the changes as part of a collaborative exercise.

React Movie App

GITHUB | DEMO

- Built movie db website with React using TMDB API and added logic to search for specific movie

Store Admin Dashboard

GITHUB | DEMO

- Built an admin dashboard using **Vite**, **React**, and **Ant Design**, connected to a Fake Store API.
- Empowers administrators to do add, modify, delete requests and also search for products.

Blog App

GITHUB | DEMO

- Crafted a dynamic blog using **Next.js**, demonstrating proficiency in **Next.js routing** and **data fetching**.
- Implemented robust navigation with multiple IDs.

Reusable Components

GITHUB

- Implemented reusable and high-quality components for different use cases
- Utilized **styled-components** library to create efficient and reusable components, merging CSS and JS in a single file. Controlled styling with props, enhancing reusability and building my first library to customize css
- Enabled adaptive learning by swiftly mastering unfamiliar libraries. Demonstrated the ability to efficiently integrate and utilize new technologies, achieving proficiency within a short time

Full-Stack POS-System App

GITHUB | DEMO

- Built Full-Stack Pos app with **Prisma** and Next.js, this Pos system streamlines restaurant operations by providing a user-friendly interface for adding and categorizing products. The intuitive design enhances menu management, allowing for quick and easy updates.
- Ability to add Products and Categories from the app directly to the database.
- The system features a dynamic calculator ensuring precise total pricing for food orders.Each transaction is meticulously recorded, and the system includes dedicated invoice pages for a comprehensive overview of orders

Store API

GITHUB AND DOCUMENTATION | DEMO

- Designed and implemented backend Api using **Express.js**, featuring a comprehensive API for a store management system. The system caters to both admins and users, providing secure authentication, product management, order processing, and more.
- Empowered with versatile CRUD (Create, Read, Update, Delete) capabilities, allows seamless management of products and orders for both administrators and users. Admins gain the ability to effortlessly view, add, update, and delete products
