Projects

Store App : This application displays various products to the user, such as clothes, electronic devices, etc. The data is fetched from the API I used (Kotlin , Jetpack Compose , Retrofit) to develop this app.

Weather App : This application displays weathers such as temperature, humidity and pressure. I used(Kotlin, retrofit)to develop this application.

Location App : This application determines your location on the map, and you can also locate anyone else who uses this application. I have used (Kotlin , Firebase, Google Maps) to develop this application.

News App : this application fetches data from the API, then the news and news channels are displayed to the user, and the user can change the language of the news. I used Kotlin and retrofit to make this application.

Voice App : With this app, you can open many apps, as well as make a call and search on Google with just your voice., I have use (Kotlin and google voices) to make this app.
