Email: 997marwan@gmail.com

Nationality: Iraqi

About Me

A software engineer with professional experience as a full-stack web applications developer. Have a firm understanding of Computer Architecture and OOP design principles. Experienced in developing high-performance bug-free advanced software systems at enterprise level.

Technologies

- Main Languages: C++ - C# - JAVA - JavaScript - HTML5 - CSS - ASSEMBLY x86
- Frameworks: ASP.NET 5/6 - Blazor WebAssembly - ASP.NET MVC - WPF
- Cloud Services: FireBase SDKs - Azure DevOps - Azure Portal

Work History

- Worked as a full-stack web developer at StackSolvers company in Sulaymanyiah from October 2021 - June 2022.
- I've Developed a (Maintenance Requests Management Web System) for (Smart Health Tower). The system tracks maintenance requests (repair and addition) from the moment they're created until the work is done by the maintenance staff and the employee who requested the work gives feedback on the work. The system is responsive and can be used on mobiles with a good UI/UX.
Front-End: Blazor WebAssembly
Back-End: ASP.NET (.NET 5)
- I created a Multi-Channel Dynamic Bot Framework. The Bot Framework is based on (Microsoft Bot Framework), which is hosted on an ASP.NET (.NET 6) Web-API. Except for a set of pre-programmed conversation procedures, the conversation line of a chat-bot developed based on the framework I've developed, is defined by a tree stored in a database. The tree is manipulated from a separate Blazor WebAssembly Application.
- I programmed the back-end of a Mobile & a Web application

	<p>StackSolvers was developing (Smart Health Tower) in ASP.NET Core (.NET 6).</p> <ul style="list-style-type: none"> ● I've recently started working as a part-time freelancer at Freelancer.com platform and have successfully completed two jobs since, both in ASP.NET Core MVC https://www.freelancer.com/u/Marwan997.
