S-ATTENDANCE APP

Human Computer Interaction Course

APP DESCRIPTION

S-Attendance is a mobile application designed to be used in universities that apply the attendance policy. This app includes three important features:

1. Taking attendance of students.
2. Showing attendance reports to students.
3. Communication between instructors and students.

The app has been designed using interaction design activities.

USER SCENARIOS AND JOURNEYS

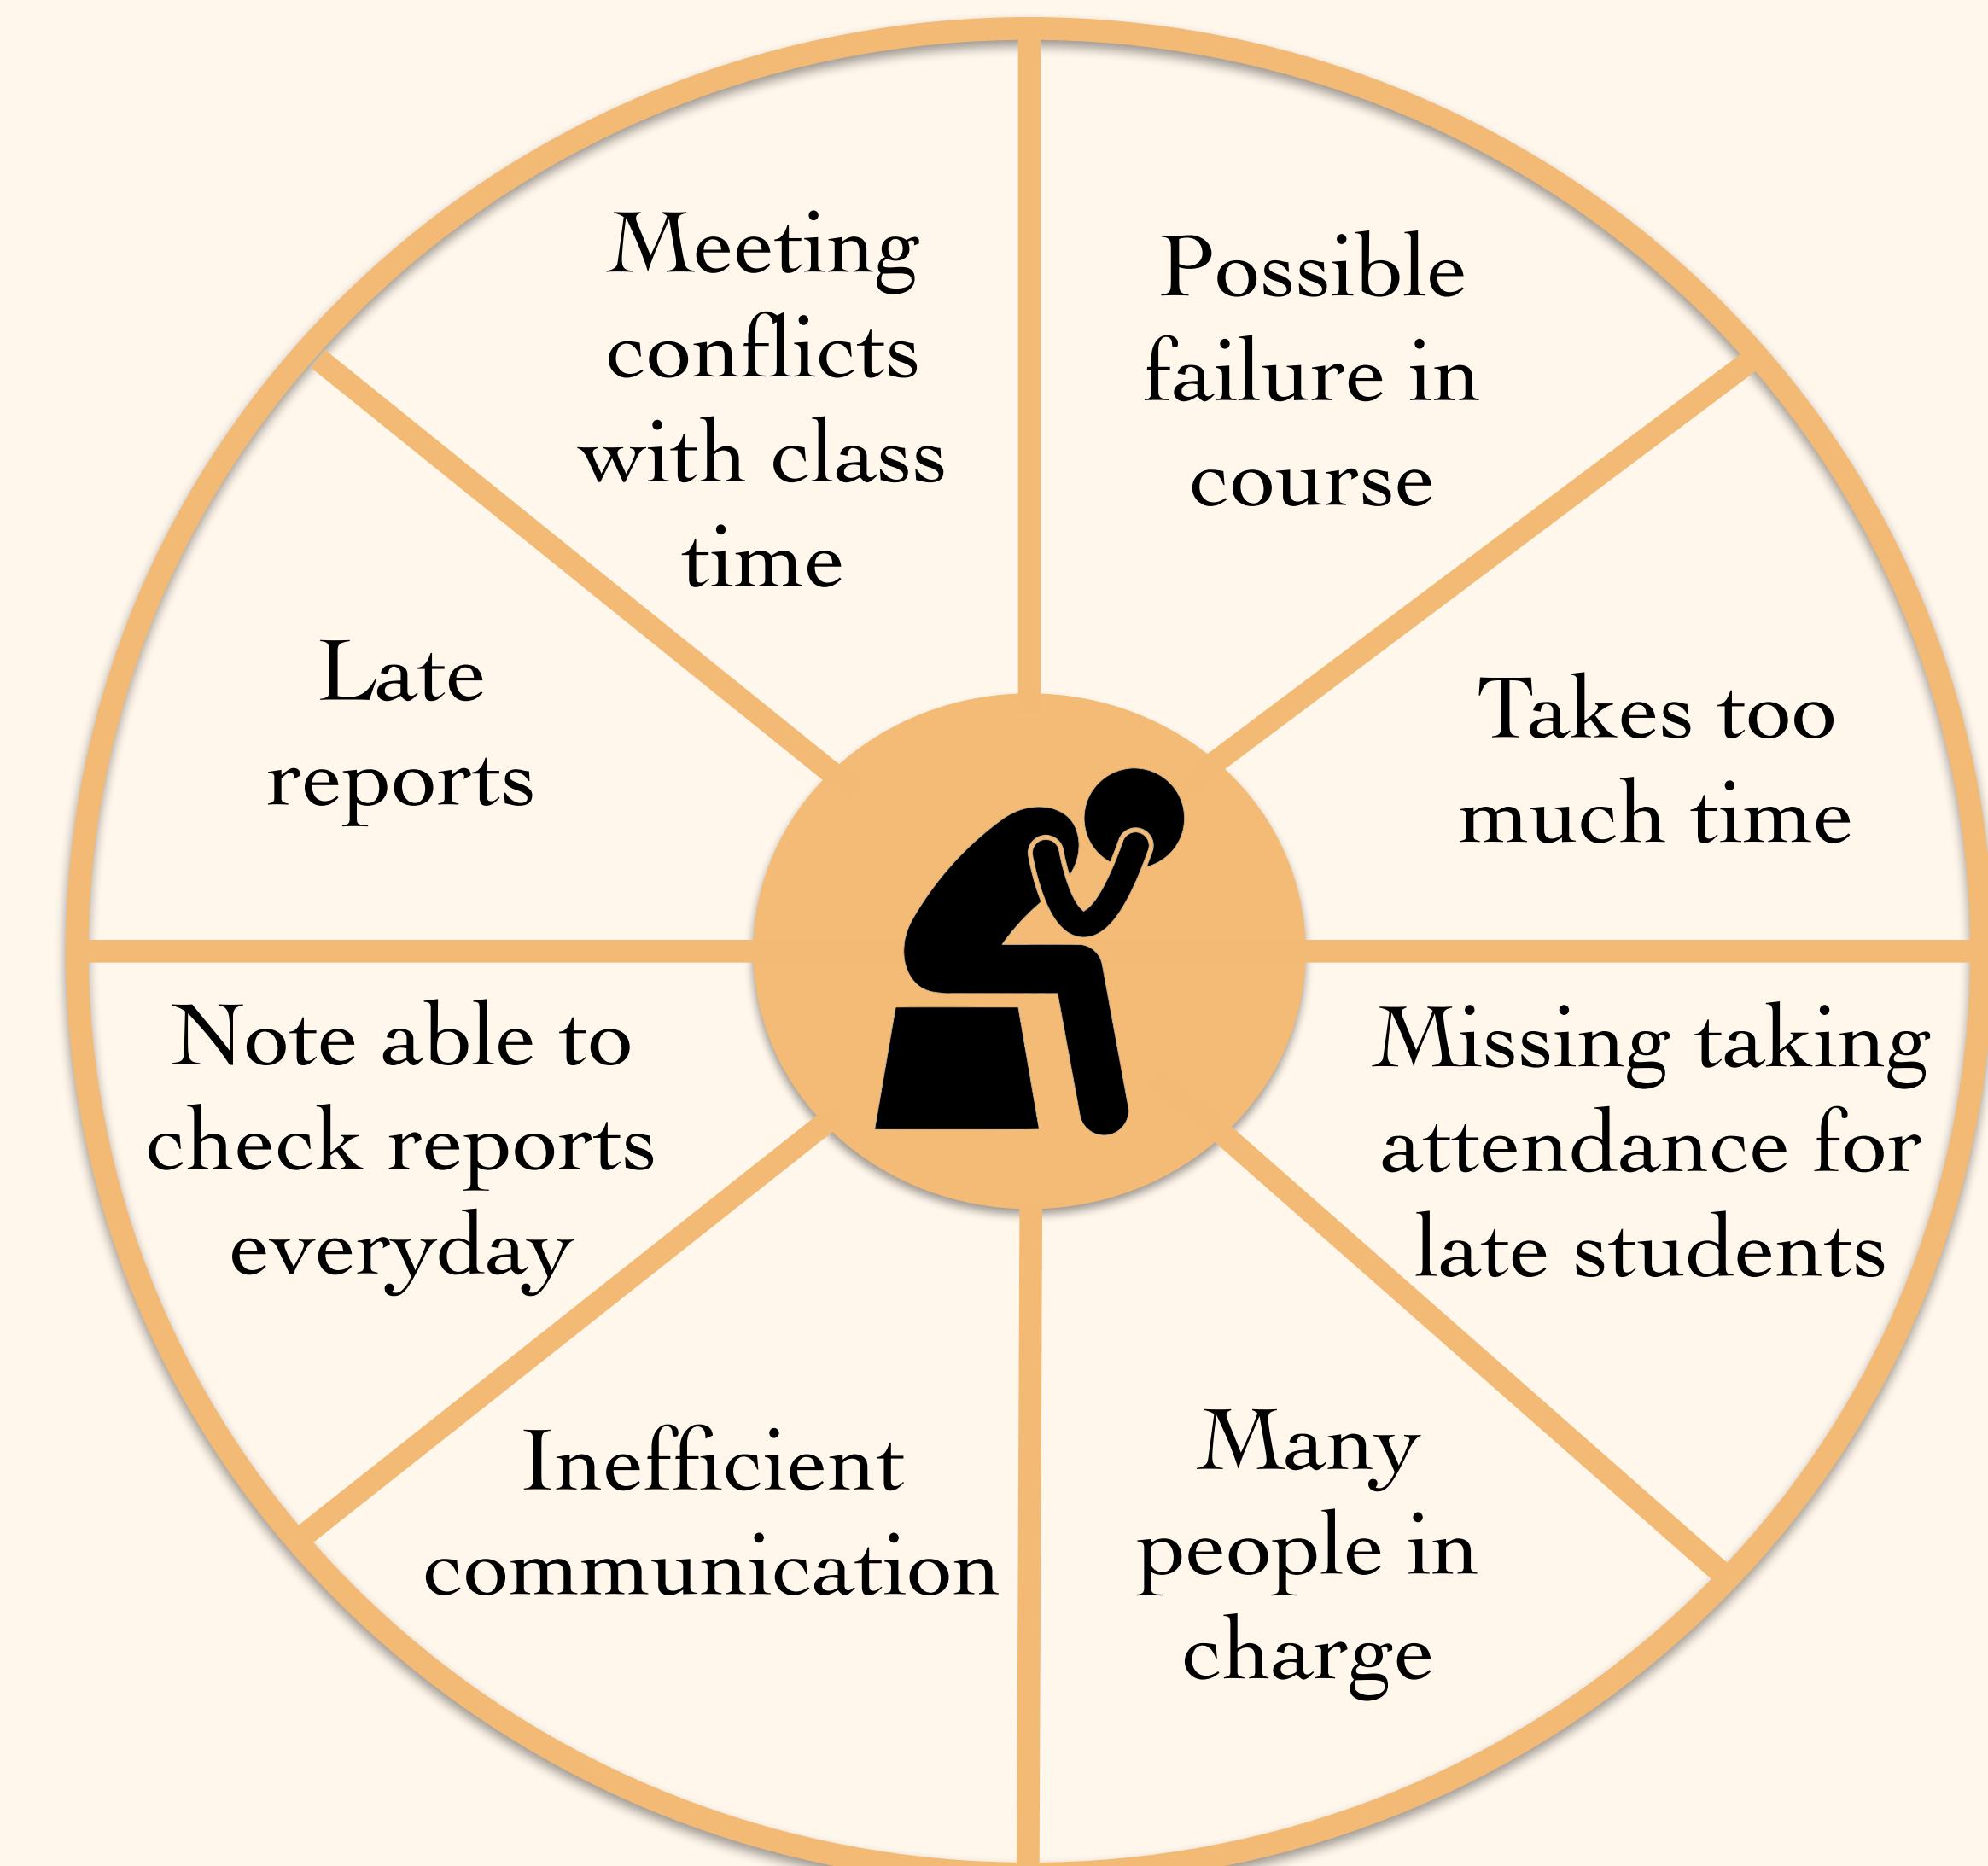

Scenario #1-Students Journey-Receiving Attendance

Actors: students, instructors, and person A(*I have considered the person who is responsible about the attendance as a person A).

	Step #1	Step #2	Step #3	Step #4
Student	The student has been received attendance with a high total of absence.	The student goes to the instructor to know what is the problem.	Going back to the instructor to fix the problem.	The e-mail has been sent to the student and the mistake that person A did it, it has been solved, but the student has another problem and he will go back to the instructor.
Staff	Person A does not know about the problem.	The instructor may be busy or is out of the office.	The instructor will tell the student that he is going to check the attendance and check with person A and wait an for e-mail from me.	The instructor will check the attendance again.
	Problem #1: the student start the new semester, but until the end of the fifth week the student received the attendance for the first time. Problem #2: the student cannot check the attendance every day, so the student should wait until they sent the attendance.	Problem #3: the student should e-mail the instructor or come back to the instructor office at another time. Problem #4: the student may have a class during this time, so the student should talk with his instructor to take permission that he is going to be late.	Problem #5: there is more than one person is responsible for the attendance, the instructor and person A. Problem #6: the student should wait until receiving the e-mail and the student does not know when is going to receive the e-mail because the student does not know how much time it will take to check with person A	Problem #7: the student is saying that he was in the class, but the instructor does not remember exactly if the student was there because it has passed too much time on it. Problem #8: the student may fail in one course just because of a mistake.
	Opportunity #1: the student could receive attendance every day or twice a week. Opportunity #2: the student could have the ability to check the attendance anytime he wants.	Opportunity #4: students could send a message to the instructor. Opportunity #5: the problem could be solved via the instructor when he receives your message and the student could know if the message has been delivered, so there will be no need to go to the instructor office.	Opportunity #6: only the instructor will be responsible for the attendance and is going to make the updates. Opportunity #7: the student will not wait too much, the student may receive the message from the instructor soon.	Opportunity #8: if the student received an attendance wrongly, the student could send the message to the instructor to check. The instructor will remember if the student was in the class or not, so there will be no mistake. Opportunity #9: the student could not blame anyone because the system is showing everything.

SOCIAL MEDIA POSTS

The image shows a promotional social media post for the "Sync Contacts App". At the top, the title "Sync Contacts App" is displayed in white text on a dark blue background. Below the title, there are three smartphone screens showing different features of the app. The left phone shows a "Welcome SYNC CONTACT" screen with fields for Email and Password, and a "LOGIN" button. The middle phone shows a "SYNC CONTACT" screen with a "Log Out" button at the top, a central sync icon, and "UPLOAD" and "DOWNLOAD" buttons below it. The right phone shows a similar "SYNC CONTACT" screen with a "Log Out" button, a sync icon, and "UPLOAD" and "DOWNLOAD" buttons. At the bottom left, the text "You will never lose your contacts" is followed by a description: "Sync Contacts is developed to help you save all your contacts and download them on different devices." At the bottom right, there is a "Available Now" message above an "App Store" download button.

You will never lose your contacts

Sync Contacts is developed to help you save all your contacts and download them on different devices.
