Skills

Javascript, VueJs, Vuex..	Html Css

Photoshop, Adobe XD	Startup leadership

Bootstrap, Vuetify

About

At the age of 13, I became interested in the world of programming and started with Q-Basic and Visual Basic. Then I got familiar with the web world and thought of implementing different ideas in this field. When I returned from military service, the world of web design had changed a lot, and I always tried to update myself. In this way, I have not been one-dimensional and I have developed skills such as back-end, front-end, product design, business knowledge, startup, etc.

Lots of WordPress projects

Nano Experts Website, Hanomed Medical Equipment, NovinoKala eCommerce, Shikkar Shoes Online Shop, Cayko Online Cake delivery, Axbaroon, Bantafood etc.

Members Scoring Software

For: Kurdistan Farhangian University Housing Cooperative

3 years ago, at the request of this cooperative, I designed a software to manage the privileges of the cooperative members, which I recently rebuilt a more modern version with Laravel and VueJs, and it has complex features such as calculating payments, fines, and so on.

Warehousing software for construction companies

For: Kurdistan Farhangian University Housing Cooperative

There are many warehousing software available in the market, but a small number of them are made according to the needs of construction companies, this software has several features that make warehouse management very easy for construction companies.

LorinCup

For: Self Project

Lorin Cup is my personal project, which I developed with my father, who is a master of physical education . In this software, sports competitions can be easily managed and with the algorithm that I have written, all kinds of sports tables can be generated with one click.
